STANDS

ALKO

The AL-KO Landing Leg is the latest addition to AL-KO's extensive range of quality trailer components.
Ideal for stabilising plant trailers, camper trailers, 5 wheeler caravans and agricultural equipment, the AL-KO Landing Leg is a necessary inclusion to the toolkit of the commercial contractor, farmer and camping enthusiast alike. All bases are covered with the AL-KO range of Landing Legs, with static loads ranging from 1,300 to 4,500kg.
An AL-KO Landing Leg can also be fitted to another brands existing mounting kit. The AL-KO Landing Leg is your ideal choice when looking to safely and efficiently stabilise your trailer, camper, 5 wheeler caravan or agricultural machinery.

TELESCOPIC STANDS

ALKO

When rigid stability is required the AL-KO range of stands fits the bill. Available in varying heights and also in weld on swivel bracket versions.
These steady stands are ideal for fixed location stabilizing of trailers and plant equipment.

COUPLING

AL-KO

• FIXED COUPLING

This style of coupling, usually suited to a 50mm Australian Standard towball, is suitable to be used where either there are no brakes fitted to the trailer or the braking system does not require activation from a sliding or overrun coupling.

AL-KO couplings are simple to attach to the towball and provide safe secure attachment of the trailer to the tow vehicle.

Typical applications for domestic trailers are up to 750 kg ATM (total loaded mass), where no brakes are required. For independent brake systems such as electric or power operated like the IQ7 system for marine trailers over 2000 kg ATM (total loaded mass), a fixed coupling is the appropriate selection. Fixed couplings for 50mm towballs are suitable for up to 3500 kg ATM (total loaded trailer mass) as long as the appropriate braking system is fitted to the trailer.

Helpful Hint: Use high tensile mounting bolts on all fixed couplings!

SA TRAILER & CHASSIS EQUIPMENT

COUPLING

AL-KO

• OVER-RIDE COUPLING

On trailers between 750 kg and 2000 kg total laden mass, braking systems that use an override principal are acceptable, as long as they provide adequate braking for the trailer and tow vehicle combination.

The principal of this type of coupling is a sliding shaft attached to the tow ball housing of the coupling, and as the tow vehicle slows down the force of deceleration is passed through the coupling shaft and pushed either on a mechanical linkage (for mechanical brakes) or acts on a linkage connected to a hydraulic cylinder providing hydraulic pressure to a braking system (hydraulic brakes).

This type of coupling is efficient if the ball load is not excessive and when load levelling devices are not used, as these devices impede the smooth operation of the coupling, impeding the brake performance.

BALL TO FIRST CENTRE HOLE (NOMINAL)	137mm	137mm	137mm	137mm

• FIXED RING COUPLING

When used in a commercial or defence department application, often a 75 mm ring type towing eye is requested.

This style of coupling is similar in function to ball type couplings (fixed and over ride) but instead of the connection to the tow vehicle being a standard 50 mm ball, the connection is a 75 mm inside diameter ring and this attaches to a "pintle hook" fitted to the tow vehicle. These types of couplings are primarily used in applications where the tow vehicle is a heavy commercial truck. As the Australian Standard AS4177 states the 50mm towball to have a maximum capacity of 3500 kg ATM (total loaded mass), ring couplings are used when higher loads are involved.

SA TRAILER & CHASSIS EQUIPMENT

COUPLING

AL-KO

• OFF-ROAD COUPLING

When a coupling is used for rough off-road use the Australian Standard degree of articulation (or angles of available movement) may be insufficient. AL-KO has solved this problem with the AL-KO Off Road Coupling. When off-road 4WD vehicles tow trailers in rugged outback conditions it is advisable that a coupling specifically designed to have greater angular movement is used.

The AL-KO Off Road Coupling with 360 degree articulation and positive towball latching system offer the maximum degree of articulation as well as a design that has been tested to 2 million fatigue test cycles, so you know that it will pass all tests.

AL-KO has a range of suitable "off-road" couplings in both fixed and override functions to provide the appropriate articulation for this use.

COUPLING

AL-KO

• OFF-ROAD PIN COUPLING

Innovative market leader AL-KO has taken ease of use to a new level with the release of the AL-KO Off-Road Pin Coupling featuring their new patent pending Click Lock™ system.

With the development of Click Lock, AL-KO now offers an off-road pin coupling that is self-locking – automatically completing the primary and secondary locking required for ADR compliance, with no additional action required by the user. The result is hands free hitching, making it safer and easier to use than other pin couplings on the market. To hitch up, simply lower the coupling over the pin. An integrated positive latching indicator confirms that you are ready to go when it clicks into place.

AL-KO's unique forged yoke allows maximum articulation on both horizontal and vertical planes sustained up to 3500kg ATM. A built in cover makes the coupling completely sealed from the elements with no loose parts, levers or dust caps.
The product has the lowest profile of any pin coupling on the market at just 83mm, making it ideal for tow vehicles with barn doors.

COUPLING

AL-KO

• SWAY CONTROL COUPLING

AL-KO has a specific coupling designed to reduce trailer sway. This 50mm ball type fixed coupling is designed to be used on trailer up to 2500 kg ATM (total loaded mass) and with a maximum towball weight of 250 kg.

This unique product incorporates a clamping system that grips the sides of a specially designed 50 mm tow ball and resists movement of the trailer. This action slows down any tendency for the trailer to sway or veer from a straight condition.

This is particularly a benefit when large trailers such as caravans are buffeted by side winds or by a passing truck and trailer combination.

****NOTE: This type of coupling must only be used with a 50mm ball which has an anti-rotation plate for attachment to the vehicle fitted.****

WINCHES

AL-KO

AL-KO Premium Marine Winches come in 5 capacities – 250kg, 500kg, 700kg, 1000kg and 1200kg, and are available with cable or webbing. Perfectly suited for quick boat retrieval onto a multi-roller trailer all 500 kg and above AL-KO Premium Marine Winches are multi speed with 2 or 3 speeds. The 1:1 ratio enables the initial retrieval of the boat onto the rollers and the second (or third) ratios allow for the full weight of your boat to be pulled onto the trailer, with ease. These winches are of the highest quality to ensure long trouble free operation. They feature ultra high strength shaft bushes, a stainless steel drive shaft, drive pawl and spring system for maximum corrosion resistance. A unique feature of the Premium range is the galvanised rectangular frame that provides the high resistance to torsional distortion. The clever handle design allows quick release and re-attachment to the desired gear shaft without the operator having to jump from one side of the trailer to the other. The bolt hole patterns suit most existing boat trailers.
